

# Hour of ANIMATION

*Where will we start?*

- at the beginning of course... 2D design with movement.

*A old discovery using AppleWorks:* you can change the slide progression to a fraction of a second... which then means we can create animation via PowerPoint or Keynote (etc)

*Sample:* OG Student Animation

Screen by Screen; Slide by Slide

**Project One:** Open PowerPoint (or other). Choose a shape. Put the shape in the top left corner

- Copy and paste the slide
- Move the shape a little to the right and down.
- (repeat these two steps)
- alter the 'move the shape' as you wish to have it move to different sections of the slide

**Project Two:** using same process, but on a touch screen... use the drawing option to create a shape and likewise 'copy and paste the slide' and make slight alterations to the image.

**Challenge:** to do an animated short that we can share at Oceanview Comic Con 2025
